PROFILE

Full-stack and mobile developer with **4 years of experience**, software engineering graduate of the Institut Africain d'Informatique. I design and ship applications that run in production: a homecare management SaaS for a UK client, a mobile marketplace, a driving-school platform built to work offline, fintech products. My specialty is **end-to-end Mobile Money integration** (MTN MoMo, Orange Money) — webhooks, idempotency, reconciliation. I ship the deployment too: Docker, CI/CD pipelines, production rollout on VPS or AWS.

PROFESSIONAL EXPERIENCE

Laser Sarl — Web & mobile developer

02/2024 – present
Bafoussam, Cameroon

Next.js · React Native · TypeScript · Node.js · Tailwind CSS

- **Responsive web and mobile interfaces** built mobile-first, for users mostly on entry-level Android devices.
- **User dashboards**: activity tracking, history, notifications.
- **Payment systems** and third-party API integration, with explicit failure handling and asynchronous confirmations.
- **+30% perceived performance** on the main journeys; a shared component base reused across client projects.

Ocean Innovation Center — Web & mobile developer

04/2023 – 02/2024
Douala, Cameroon

React Native · Expo · Firebase · TypeScript

- Designed and built an **interactive mobile app** for an innovation hub, shipped on Android and iOS.
- **Push notifications** (Firebase Cloud Messaging): a direct communication channel with the community, with no third-party dependency.
- Short functional iterations with the business team, driven by real usage.

DCE — Doho Consulting & Engineering — Full-stack consultant

08/2022 – 12/2024
Douala, Cameroon

Fixed-scope consulting engagement, run alongside my salaried roles.

React.js · Spring Boot · Java · Docker Compose · CI/CD

- **React.js** interfaces wired to **Spring Boot** backend services.
- **Microservice** decomposition and application performance work: queries, caching, server-side pagination.
- **Automated deployments** (Docker Compose, CI/CD) — replaced manual releases with a repeatable pipeline.

Sarki Money — Support & infrastructure internship

07/2022 – 10/2022
Galim, Cameroon

- User support, workstation fleet maintenance, network management.

SELECTED WORK

Homecare management SaaS — UK client

2024 – present

NestJS · TypeScript · Next.js · React · PostgreSQL · Docker · Jest · CI/CD

- **Lead contributor** on the API and the management portal, on a product evolving continuously for more than two years.
- End-to-end business coverage: rostering, visits, timesheets, care plans, medication management, contracts, **invoicing** and **payroll computation**.
- Duplicate-booking detection and audit logs, required by sector compliance; the same core reused to launch a second platform in the domain.

Driivio — driving-school platform (mobile + SaaS)

2026

React Native · Expo SDK 56 · Next.js 15 · PostgreSQL · Mobile Money

- Consumer app for highway-code revision, built **offline-first**: connectivity is neither continuous nor free for the user.
- **White-label multi-tenant** back office by role (school, instructor, partner, admin): scheduling, students, vehicles, exams, billing.
- Mobile Money payments, including third-party payment on the candidate's behalf.

- Built all three pieces solo: a layered **Go backend**, the mobile app and the admin console.
- Full customer → designer → print shop → delivery chain, with prices computed from tariff grids instead of a negotiated quote per order.

- Multilingual site optimised for SEO and performance — **Lighthouse 95+** — deployed on AWS.
- **React Native KYC SDK**: identity verification factored into a reusable module, embeddable across several products.

- **Pla'nif** — African meal planner: an FCFA pricing engine (piece ↔ kilo conversions, national-median fallback) and budget-constrained menu generation.
- **Timesheet processing** — turns raw clock-in Excel exports into computed hours: from an afternoon of spreadsheet work to minutes.
- **Africa AI Forum** — official platform for a non-profit (Next.js, AWS). **Gesco** — school management (Expo + Spring Boot), shipped on Android and iOS. **My Collector** — daily savings collection with the MTN Mobile Money API.

TECHNICAL SKILLS

Front & mobile	React.js, Next.js, React Native (Expo, CLI), TypeScript, Tailwind CSS, Material UI, mobile-first & responsive design, accessibility
Backend & APIs	Node.js, NestJS, Express, Go, Java / Spring Boot, PostgreSQL, MongoDB, Redis, Firebase, REST APIs, Mobile Money (MTN MoMo, Orange Money)
DevOps	Docker & Docker Compose, CI/CD (GitLab CI, GitHub Actions), AWS (EC2, S3, CloudFront), VPS deployment, Nginx, testing (Jest)
Architecture	Layered & clean architecture, microservices, multi-tenancy, offline-first & sync, object-oriented design, MVC
Ways of working	Agile / Scrum, code review, Git (branching, rebase, merge requests), technical documentation, AI tooling integration (OpenAI API, automation)

EDUCATION

LANGUAGES & INTERESTS

French — native · **English** — professional
Football (former school team captain), AI watch, open source.
